FOREWORD

TO: Hospital Administrators
Medical Staffs, and Nurses

This is the fifth annual report of births, and infant and fetal deaths that occurred in Montana Hospitals. The objectives of this report are to disseminate vital information to the medical and nursing professions and to hospital administrators; also, to improve the caliber of maternal and newborn care in hospitals.

As in previous years, all hospitals in Montana doing obstetrics cooperated with the State Board of Health and the Maternal and Child Welfare Committee of the Montana Medical Association by returning quarterly information on the number of live births, stillbirths, neonatal, and infant deaths occurring in their respective hospitals. This information has been tabulated for each of four groups representing a classification by number of hospital beds.

In 1960, there were 17,045 live births in Montana, by place of occurrence (this does not include home deliveries), for a rate of 25.3 per 1,000 estimated population. There were 322 infant deaths, with a rate of 18.9 per 1,000 live births. Of these, there were 279 neonatal deaths, with a rate of 16.3 per 1,000 live births. There were also 202 fetal deaths, with a rate of 11.0 per 1,000 live births. The perinatal death rate was 28.3 per 1,000 live births.

The above data show little difference from the perinatal and infant death rates in 1959, even though the birth rate had markedly declined. In 1959, the birth rate (by place of occurrence) was 26.1 per 1,000 estimated population. The infant death rate was 19.2; neonatals, 16.2; fetal, 12.3; and perinatal, 28.6, all calculated rates per 1,000 live births.

Because of the interest shown in previous reports of this type, it has been decided to continue this study. It is hoped that hospitals and medical staffs will continue to cooperate by reporting mortalities and by continuing to support the perinatal death studies. This year, hospitals are ranked on the basis of their neonatal death rates instead of infant deaths. It was felt that by so doing a more accurate picture of the obstetric and newborn care rendered would be obtained. The hospital ranked number 1, in each group, has the lowest neonatal death rate in that bed class. Your hospital is checked in red in the report. It is further hoped that the administrators, medical staffs, and nurses will review the report and consider where improvements can be made in their own hospital.

We are continuing the cumulative report, which this year will be for five years. Those hospitals not having figures for five years are not included in this report.
